

## Manufacturing & Engineering

## Paperless Business Compliance

Consistent quality from material intake through to finished product shipment.

APPLIED ✓

## Lean. Consistent. No compromise.

**If you're unable to ensure consistency of product and standardisation of process you can't earn the trust of your organisation's lifblood, your customers.**

The software solution from Applied Principles is perfectly suited for achieving and sustaining the highest levels of quality and consistency by controlling how you meet both yours and your customer's high demands.

The operational visibility provides powerful insights to drive out inefficiencies. Inbuilt, proactive scheduling of maintenance prevents costly downtimes and true accountability removes any possibility of non-compliance.

## Real time and consistent business process management.

Applied Principles arm you with the technology to continuously improve the consistent quality culture throughout your business, promoting increased productivity, profitability and safety.

The software's flexibility makes it suitable for any organisation in need of consistent business process compliance, including the mining, ferroalloys, food, engineering and manufacturing industries; covering quality management, production, auditing, maintenance and health & safety.

Each department can develop customisable checks, tests, inspections, audits and workflows. Including immediate corrective actions with photos, signatures and alerts, all performed in real time.

The insights gained will put your management team in a position to make dynamic business-critical decisions, based on the consistent business process data the system generates.

“ The audit process, once implemented, is owned and managed by the team who are directly responsible for the control of the process. This creates much better links between process owners and quality teams who can now focus on reducing variation as opposed the watching what each other does. I personally feel that this will become a key improvement tool for KMF in years to come and will change the way we manage quality, maintenance and health and safety. ”

- 5S AUDITS
- PRE-SHIFT CHECKS
- FORK LIFT CHECKS
- SITE INSPECTIONS
- GOODS IN INSPECTIONS
- DESPATCH CHECKS
- NEAR MISS ACCIDENT REPORTS
- RISK ASSESSMENTS

# APPLIED principles

“ Principle Suite allows users to take an idea, as well as existing paper systems and apply it to an easy to use platform that can adapt and change as the user requires and the organisation changes. It is a fully integrated system, that is only limited to one's imagination. ”

**Nino Ciani**  
Elmacast Engineering

## About Us

After almost 15 years of partnering with some of the biggest names out there, we know what works for our customers and exactly what they expect from us..

From our head office in the United Kingdom, and our branch office in South Africa, we work directly with the majority of our customers. We also have a small number of specialised business partners that can supply our software.

It has always been our belief that the customer should retain full control of their own processes and data, without the need for ongoing consultancy and configuration costs.

Our software is  
a representation of us  
and everything we stand for.

## Implementation & Support

Our consultants partner closely with you throughout the scoping, installation, training and implementation processes. Our dedicated development team ensure software optimisation resulting in minimal installation and storage requirements.

We guide you through implementation and teach you how to convert your existing paperwork into a digital process, including how to design further workflow processes for non-conformances.

Post implementation you're able to totally customise the solution to best meet your needs and our expert support team is always on hand to offer further support as required.

Your partner, not just your service provider.

“ The great thing about the software is just how easy it is to use, intuitive, very user friendly and almost anyone can use it with very little training. This allows us to be very dynamic and change to the business needs very very quickly. I can absolutely recommend the Applied Principles software to other people. ”

**Jason George**

IT & Facility Manager,  
Lasershape

### Why choose us?

Our implementation, software and support is second to none

#### ✓ SIMPLE IMPLEMENTATION

We aim to get you up and running within one month

#### ✓ DEDICATED DEVELOPERS

Our team continually add new features

#### ✓ COMPLETELY CUSTOMISABLE

You are in total control of your processes and data

#### ✓ FUTURE PROOF YOUR BUSINESS

The system evolves as your business grows

#### ✓ BESPOKE SOFTWARE SOLUTIONS

We can deliver custom development projects
